2.2.1 Source Code and Working Directories

2.2 Standalone Admin Module Installation · https://i2b2.org/docs/2-2-1-source-code-and-working-directories/

Source Code for the i2b2 Administration Module

The admin module is a component of the i2b2 web client. Extract a copy of the i2b2 web client into a directory called admin.

Web Server Directory:

Depending on your operating system and machine configuration the location of your web server (httpd) directory may reside in a different location than the examples provided. These examples are based on the most common default paths for a Windows Server and a Linux Machine.

Examples:

Linux: /var/www/html

Windows: C:\inetpub\wwwroot
