Overview

6.7.3. SAML Authentication (v1.7.13+) · https://i2b2.org/docs/6-7-3-saml-authentication-v1-7-13/

To create users that can be authenticated via SAML:

1. Create a user for each SAML-authenticating user with the user name set to the SAML EPPN.
2. Create a pm_user_param setting authentication_method to SAML.
3. Alternately, configure the user registration tool for federated mode, and it will allow users to create an i2b2 account if they have a valid SAML authentication. (Such users will still not have access to any projects until the administrator adds projects to his/her profile.)

Also see the Chapter on Configuring SAML for client/server configuration.
